CONTENTS OF VOLUME 153

NUMBER 1, FEBRUARY 15, 1986

An Improved Enzymatic Synthesis of Labeled Gibberellin A ₁₂ -Aldehyde and Gibberellin A ₁₂	<i>Paul R. Birnberg, Sonja L. Maki, Mark L. Brenner, Gregory C. Davis, and Michael G. Carnes</i>	1
Measurement of 5-Aminolevulinic Acid Synthase Activity in Whole and Fractionated Human Bone Marrow: Effect of Myeloid Cell Lysis by Monoclonal Antibody	<i>Edward J. Fitzsimons, Alison May, George H. Elder, and Allan Jacobs</i>	9
FerriDye: Colloidal Iron Binding followed by Perls' Reaction for the Staining of Proteins Transferred from Sodium Dodecyl Sulfate Gels to Nitrocellulose and Positively Charged Nylon Membranes	<i>Marc Moeremans, Marc De Raeymaeker, Guy Daneels, and Jan De Mey</i>	18
Quantitation of Biological Retinoids by High-Pressure Liquid Chromatography: Primary Internal Standardization Using Tritiated Retinoids	<i>Malford E. Cullum and Maija H. Zile</i>	23
Purification, Solubility, and pK _a of Veratridine	<i>Leslie C. McKinney, Sumitra Chakraverty, and Paul De Weer</i>	33
High-Performance Liquid Chromatographic Analysis of 2-Aminofluorene and Its Metabolites in Monolayer Cultures of Rat Hepatocytes	<i>Mary Jo Miller and Charlene A. McQueen</i>	39
Determination of Short-Chain Acyl-Coenzyme A Esters by High-Performance Liquid Chromatography	<i>Yoshitaka Hosokawa, Yoshiharu Shimomura, Robert A. Harris, and Takayuki Ozawa</i>	45
High-Performance Liquid Chromatography followed by Peroxyoxalate Chemiluminescence Detection of Acetylcholine and Choline Utilizing Immobilized Enzymes	<i>Kazumasa Honda, Kimitoshi Miyaguchi, Hirohito Nishino, Hisaaki Tanaka, Toshio Yao, and Kazuhiro Imai</i>	50
Two-Dimensional Electrophoresis of Yeast Histones on Cellogel Strips and Polyacrylamide Gels	<i>Martin Veth and Johann Sonnenbichler</i>	54
Evaluation of the Micromethod for Determination of Glutathione Using Enzymatic Cycling and Ellman's Reagent	<i>Peter Eyer and Dušan Podhradský</i>	57
A Radiometric Immunosorbent Assay for the Detection of Anti-hormone-Binding Protein Antibodies	<i>Eric A. Pierce, Margaret C. Dame, and Hector F. DeLuca</i>	67
Detection and Quantitation of Cellulase by Congo Red Staining of Substrates in a Cup-Plate Diffusion Assay	<i>John H. Carder</i>	75
A Spectrophotometric Microassay for Sulfated Glycosaminoglycans Using a Laser Densitometer	<i>André A. Klompmakers and Thijs Hendriks</i>	80
Mass Spectrometry and Chromatography of t-Butyldimethylsilyl Derivatives of Cytokinin Bases	<i>Charles H. Hocart, O. Choon Wong, David S. Letham, Stephen A. B. Tay, and John K. MacLeod</i>	85
Purification of Ribulose-1,5-bisphosphate Carboxylase/Oxygenase with High Specific Activity by Fast Protein Liquid Chromatography	<i>Michael E. Salvucci, Archie R. Portis, Jr., and William L. Ogren</i>	97
An Isoelectric Focusing Procedure for Erythrocyte Membrane Proteins and Its Use for Two-Dimensional Electrophoresis	<i>Patricia A. Dockham, Richard C. Steinfeld, Cynthia J. Stryker, Steven W. Jones, and George A. Vidaver</i>	102

Determination of β -Phenylethylamine Concentrations in Human Plasma, Platelets, and Urine and in Animal Tissues by High-Performance Liquid Chromatography with Fluorometric Detection	
<i>Motohiro Tsuji, Ken Ohi, Chiaki Taga, Tetsuro Myojin, and Saburo Takahashi</i>	116
A Sensitive Staining Technique for the Detection of Phosphohydrolase Activities after Polyacrylamide Gel Electrophoresis	<i>Gary W. Zlotnick and Michael Gottlieb</i> 121
Purification of the Iron-Sulfur Protein, Ubiquinone-Binding Protein, and Cytochrome c_1 from a Single Source of Mitochondrial Complex III	
<i>Yoshiharu Shimomura, Morimitsu Nishikimi, and Takayuki Ozawa</i>	126
3-Hydroxybenzo[<i>a</i>]pyrene Glucuronidation by Cells: A Direct Fluorometric Assay in Culture Medium	<i>Michel Boiret, Alain Marty, and Michel Deumie</i> 132
Improved Simple Chromatographic Method for the Fractionation of Major Classes of Mammalian Nucleic Acids	<i>D. A. Popović and V. Leskovac</i> 139
An Automated Method for the Quasi-continuous Analysis of Degradation and Transfer Products during the Enzymatic Hydrolysis of Oligosaccharides	
<i>George Schmid and Christian Wandrey</i>	144
Detection of Protein Kinase Activity in Sodium Dodecyl Sulfate-Polyacrylamide Gels	
<i>Robert L. Geahlen, Michael Anostario, Jr., Philip S. Low, and Marietta L. Harrison</i>	151
Single-Step, Quantitative Derivatization of Amino, Carboxyl, and Hydroxyl Groups in Iodothyronine Amino Acids with Ethanolic Pivalic Anhydride Containing 4-Dimethylaminopyridine	
<i>Markus Joppich, Regula Joppich-Kuhn, Abdellah Sentissi, and Roger W. Giese</i>	159
Simultaneous Measurement of Bone Resorption and Collagen Synthesis in Neonatal Mouse Calvaria	<i>Thomas J. Hefley, Nancy S. Krieger, and Paula H. Stern</i> 166
Comparison of Nucleic Acid-Protein Interactions in Solution and in Polyacrylamide Gels	<i>Arnold Revzin, John A. Ceglarek, and Mark M. Garner</i> 172
Immunoaffinity Purification of the Lipid Transfer Protein Complex Directly from Human Plasma	<i>Steven J. Busch, Charles R. Duvic, Jeff L. Ellsworth, Jahei Ihm, and Judith A. K. Harmony</i> 178
The Separation of <i>o</i> -Phthalaldehyde Derivatives of Amino Acids by Reversed-Phase Chromatography on Octylsilica Columns	
<i>Harry W. Jarrett, Kevin D. Cooksy, Bernice Ellis, and James M. Anderson</i>	189

BOOK REVIEWS

<i>Plant Drug Analysis, A Thin-Layer Chromatography Atlas</i> , by H. Wagner, S. Bladt, and E. M. Zgainski	Reviewed by <i>Charles D. Hufford</i> 199
<i>A Practical Guide to Molecular Cloning</i> , by Bernard Perbal	Reviewed by <i>Alan Kimmel</i> 199

NUMBER 2, MARCH 1986

A Spectrophotometric Solid-Phase Fibrin-Tissue Plasminogen Activator Activity Assay (SOFIA-tPA) for High-Fibrin-Affinity Tissue Plasminogen Activators	
<i>Eduardo Angles-Cano</i>	201
Isolation and Characterization of Milk Protein Nuclear RNAs in Rat Mammary Gland	
<i>Terry L. Brown and Jeffrey M. Rosen</i>	211

Purification and Analysis of Mitochondrial Membrane Proteins on Nondenaturing Gradient Polyacrylamide Gels	<i>Donald R. Kuonen, Peter J. Roberts, and Ian R. Cottingham</i>	221
Polymerization of Acrylamide at Acid pH Using Uranyl Nitrate	<i>V. V. Deshpande, A. M. Bodhe, H. S. Pawar, and H. G. Vartak</i>	227
Separation and Purification of Individual Neurofilament Proteins by Reverse-Phase High-Performance Liquid Chromatography	<i>Koon-Sea Hui, Maria Hui, Fung-Chow Chiu, Miriam Banay-Schwartz, Teresita Deguzman, Robert S. Sacchi, and Abel Lajtha</i>	230
Quantification of Chymosin Action on Nonlabeled κ -Casein-Related Peptide Substrates by Ultraviolet Spectrophotometry: Description of Kinetics by the Analysis of Progress Curves	<i>Servaas Visser and Harry S. Rollema</i>	235
Coomassie Brilliant Blue G-250 Dye-Binding Technique for Determination of Autolytic Protein Breakdown in <i>Euglena gracilis</i> and Comparison to Other Methods of Autolysis Measurement	<i>Rainald Krauspe and Angelika Scheer</i>	242
OH Microelectrode: Modified Thomas Recessed-Tip Configuration	<i>Leo R. Pucacco, Susan K. Corona, Harry R. Jacobson, and Norman W. Carter</i>	251
Lowry Protein Assay Using an Automatic Microtiter Plate Spectrophotometer	<i>Hugh J. L. Fryer, George E. Davis, Marston Manthorpe, and Silvio Varon</i>	262
Adaptation of the Bicinchoninic Acid Protein Assay for Use with Microtiter Plates and Sucrose Gradient Fractions	<i>Margaret G. Redinbaugh and Rickie B. Turley</i>	267
A Sequential, Solid-Phase Assay for Biotin in Physiologic Fluids That Correlates with Expected Biotin Status	<i>Donald M. Mock and Dwight B. DuBois</i>	272
A Biological Assay for Epidermal Growth Factor/Urogastrone and Related Polypeptides	<i>Graham Carpenter and Joseph Zendegui</i>	279
A Radiometric Assay for Ganglioside Sialidase Applied to the Determination of the Enzyme Subcellular Location in Cultured Human Fibroblasts	<i>Vanna Chigorno, Gloria Cardace, Marina Pitto, Sandro Sonnino, Riccardo Ghidoni, and Guido Tettamanti</i>	283
Modification of Transglutaminase Assay: Use of Ammonium Sulfate to Stop the Reaction	<i>Junichi Takagi, Yuji Saito, Takashi Kikuchi, and Yuji Inada</i>	295
Nucleic Acid Chromatography: Substitute Solid Support Material for RPC-5 Columns	<i>J. M. Flanagan, R. K. Fujimura, and K. Bruce Jacobson</i>	299
Separation and Quantitation of Metallothioneins by High-Performance Liquid Chromatography Coupled with Atomic Absorption Spectrophotometry	<i>Lois D. Lehman and Curtis D. Klaassen</i>	305
A Micromethod for Measuring the Molar Concentration of Polyadenylated RNA in the Presence of Ribosomal RNA	<i>Marc S. Krug and Shelby L. Berger</i>	315
Double Labeling of Transferrin: Tritium Labeling of Sialic Acid and ^{125}I or ^{59}Fe Labeling of the Protein Moiety	<i>Takumi Kishimoto and Mehdi Tavassoli</i>	324
Phase Separation of Rat Intestinal Brush Border Membrane Proteins Using Triton X-114	<i>Chinnaswamy Tiruppathi, David H. Alpers, and Bellur Seetharam</i>	330
A Fluorogenic, Mixed-Disulfide Reagent for Thiol Assay	<i>Kevin J. Willis and Francis W. J. Teale</i>	336
A New Approach for Detection and Assignment of Disulfide Bonds in Peptides	<i>Razieh Yazdanparast, Philip Andrews, David L. Smith, and Jack E. Dixon</i>	348
^{14}C Acrylonitrile: Preparation via a Stable Tosylate Intermediate and Quantitative Reaction with Amine Residues in Collagen	<i>Lila Graham and Gerald L. Mechanic</i>	354

A Radiochemical Study of Irreversible Adsorption of Proteins on Reversed-Phase Chromatographic Packing Materials	
<i>Paul C. Sadek, Peter W. Carr, Larry D. Bowers, and Louis C. Haddad</i>	359
Negative Ion Chemical Ionization Mass Spectrometry of 2,4-Dinitrophenyl Amino Acid Esters	
<i>Todd D. Williams, Lori Vachon, and Robert J. Anderegg</i>	372
Quantitative Affinity Chromatography: Increased Versatility of the Technique for Studies of Ligand Binding	
<i>Douglas A. Bergman and Donald J. Winzor</i>	380
Sample Preparation for Inositol Measurement: Sep-Pak C ₁₈ Use in Detergent Removal	
<i>Susan E. Laursen, Harvey R. Knull, and John K. Belknap</i>	387
AUTHOR INDEX FOR VOLUME 153	391

The Subject Index for Volume 153 will appear in the December 1986 issue as part of a cumulative index for the year 1986.

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell and tissue culture techniques that are of general application.
- Sequencing and synthesis of nucleic acids; chemical mutagenesis.
- Purification methods for enzymes and other proteins which contain a novel aspect and in which a high level of purity has been achieved.
- Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that have a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1983 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC-IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ inches (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1980. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Stein, S., and Udenfriend, S. (1984) *Anal. Biochem.* **136**, 7-23.
2. Metzler, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246-409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
